Broadband speeds – a new priority for property buyers

The advent of broadband has dramatically altered our expectations about what we can do from the comfort of our own home. The ability to buy groceries, order a new dress, stream HD movies, make video calls and download files all at the same time has changed the way we think about where we live. With that in mind, it is no surprise that broadband speeds play an important role in house-hunters and landlords' decisions when looking for new homes or buy-to-let properties.

Research by internet service provider KC suggests that three out of four people take broadband speeds into account when choosing a home. Rightmove certainly agree, with results of their recent survey indicating that people now value broadband speeds just as much as a property's proximity to a good school or transport infrastructure.

Of course, out of everyone it is the younger generation who place the most emphasis on internet speeds, with Rightmove reporting that 18 to 35 year olds are influenced by how fast a connection is. Around half of this age bracket say they would reconsider a property if they found that the connection speed was inadequate for their needs.

As the world becomes ever smaller and more integrated via the web, there is a greater amount of people working from home instead of commuting to an office. ONS reports that the total figure of home-based workers in the UK is currently 4.2 million; nearly 14% of the entire UK workforce. In SE18, 3.5% of the workforce works from home,

equivalent to around 1,220 people. Those who do work from home might not have to worry about the daily grind when commuting to work, but they will want to make sure their internet speed does not cause them a daily headache.

Even for those not working from home, broadband has become an essential part of everyday life. Video messaging services like Skype and FaceTime have changed the way we communicate, while live streaming of music and movies on sites like Spotify and Netflix has made the need for an uninterrupted internet connection that much more important.

Fibre broadband availability in SE18

A survey conducted for the Halifax showed that over 20% of people surveyed would be willing to pay more for a property with a fast broadband connection than for one without. Broadband provider Hyperoptic also recently found that people were willing to pay up to 11% more for a property with 100Mbps broadband speeds. Given the average property price in SE18 is £328,300, this equates to an additional £36,100. Hyperoptic also found that 60% of the people they

spoke to said an internet connection was more important than having a garden, or good neighbours. These results just go to show what an important role superfast broadband plays in people's lives.

But what broadband speeds can you expect? Fibre broadband is available in SE18, with 34.3% of users having access to it. The maximum speed you are likely to get is 89Mbps, with the average speed around 18Mbps, though minimum speeds of 5Mbps are possible.

The government aims to have superfast broadband available to 95% of UK homes by late 2017.

However, this is already a delay from the intended 2015 release. With that in mind, many potential house buyers are keen to know broadband speeds before they move into an area.

If you would like more information on broadband speeds in relation to your property or a property you are interested in purchasing in SE18, give us a call and we'll be happy to assist faster than you can say megabytes per second.

Demographic profile

Each area of the country has a different demographic profile in terms of the age of local residents. The exact balance of age groups has a profound effect upon the demand profile of the local market. The average age in SE18 is 31 years old. This is lower than the London average (33 years old) and lower than the national average (39 years).

House price growth

Since the last quarter of 2013, average sales prices of detached properties in SE18 have increased by 77.0%, which represents the best performance of all property types. The next highest performers were terraces, which saw an increase of 55.8%, followed by semis (55.7%). The poorest performance came from flats, which still managed to increase by 29.2%.

Market liquidity

The volume of sales in a given area is a powerful measure of the vitality of local housing markets. In the last two years there have been 2,185 sales in SE18. Flats accounted for the largest number of sales (1,227), followed by terraces (794), then semis (137) and detached properties accounted for the fewest sales (27).

How big are our homes?

Each area in the UK varies dramatically according to the average size of properties, as measured by the number of bedrooms. In SE18 the mix is like so:
